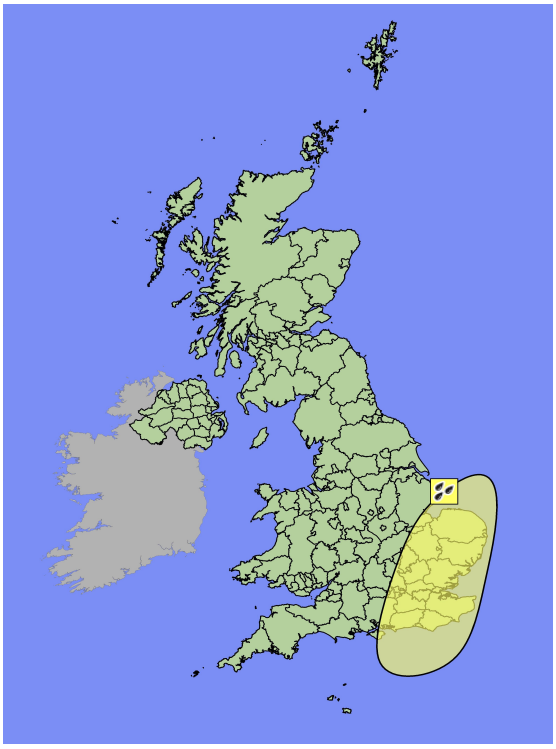
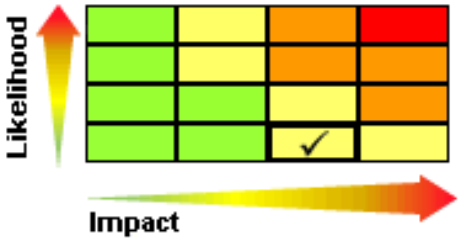
National Severe Weather Warning Service





Chief Forecasters Assessment
The very high temperatures (locally into the 30's of Celsius) expected on Sunday and Monday, combined with high humidity could generate some very intense thunderstoms as the weather breaks down. At this stage it is not clear how widespread showers will be, and so the likelihood at any given point of severe weather is relatively low.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **21:00 on Mon, 27th Jun 2011** until **12:00 on Tue, 28th Jun 2011**

Heavy showers and thunderstorms from Monday evening through into Tuesday could merge into longer spells of thundery rain giving the potential for 25-50 mm in a few hours. There is a risk of flash flooding and large hail.
